

Name:		Date:		Section:	
Exercise Title: Using HTML Forms		Laboratory Activity 5		Score:	/ 50

Objectives

At the end of this activity, you should be able to:

- Explain and apply the basic structure of an HTML document (DOCTYPE, <html>, <head>, <body>).
- Create an HTML form that collects user information.
- Use form elements such as text inputs, radio buttons, checkboxes, a textarea, and a submit button.
- Apply HTML formatting tags (<p>, <label>,
, <fieldset>, <legend>) to organize and improve the usability of a form.

Materials and Tools

- A code editor (e.g., Visual Studio Code, Notepad++, or Sublime Text).
- A web browser (e.g., Google Chrome, Microsoft Edge, or Mozilla Firefox).

Before You Begin

- Create a folder for this activity and keep all your files there.
- Work independently. Type the code yourself instead of copying and pasting, and add a comment only where it helps explain your code.
- Save your work often and refresh the browser after every change so you can check your progress.

Instructions

Step 1. Create a New HTML Document

1. Open your code editor and create a new file.
2. Save it as **Lastname_FormActivity.html** (replace "Lastname" with your own last name; do not use spaces).
3. Type the basic HTML structure, which must include:
 - The <!DOCTYPE html> declaration on the first line.
 - The <html> element (you may add lang="en") that wraps the entire page.
 - A <head> containing <meta charset="UTF-8"> and a descriptive <title> (e.g., "Lastname – HTML Form Activity").
 - A <body> that contains all visible content.
4. Indent nested tags consistently (2 or 4 spaces) so the structure is easy to read.

Step 2. Build the HTML Form

1. Inside the <body>, add a heading (e.g., <h1>) with the text "HTML Form" to serve as the section title.
2. Below the heading, add a <form> element (for practice, you may add action="#" and method="post"). All of the following elements must be placed inside this form:
 - **Name:** a text input (type="text") with a name and an id.
 - **Email:** an input using type="email" with a name and an id.
 - **Gender:** three radio buttons (Male, Female, Other). All three must share the same name attribute and have different value attributes.
 - **Hobbies:** at least three checkboxes (e.g., Reading, Traveling, Sports), each with its own value.
 - **Additional Comments:** a <textarea> with a set number of rows and cols.
 - **Submit:** a submit button with a clear label (e.g., "Submit").

Step 3. Apply HTML Formatting

1. Use <p> tags to separate the different parts of the form (e.g., one paragraph for Name, one for Email, one for the buttons).
2. Use <label> for every form control. Connect each label to its input using the for attribute, which must match the input's id. (For radio buttons and checkboxes, each option needs its own label.)
3. Use
 only where a line break is needed (e.g., between a label and its textarea, or between options).
4. Group related elements using <fieldset> and give each group a caption using <legend>. At a minimum, create a group for "Gender" and another for "Hobbies". You may also group "Personal Information" (name and email).

Step 4. Test Your Work

Open your file in a web browser and check that:

- The page displays the "HTML Form" heading and all required elements.
- Only one gender option can be selected at a time.
- More than one hobby can be selected.
- Clicking a label activates (focuses or selects) its matching input.
- The email field rejects an entry that is not a valid email format when you press Submit.
- Clicking the submit button works without any error.

Step 5. Save and Submit

1. Confirm that the file name is **Lastname_FormActivity.html**.
2. Submit the .html file through the platform or channel designated by your instructor, on or before the deadline.
3. Send the link for the github repository and live website.

Suggested Structure (Guide Only)

Use this outline to plan your code. Fill in the missing parts yourself.

```
<!DOCTYPE html>
<html lang="en">
  <head>
    ... <!-- meta charset and title -->
  </head>
  <body>
    <h1>HTML Form</h1>
    <form action="#" method="post">
      <fieldset>
        <legend>Personal Information</legend>
        <p> ...label + input for name... </p>
        <p> ...label + input for email... </p>
      </fieldset>
      <fieldset> ...Gender: legend + 3 radio buttons with labels... </fieldset>
      <fieldset> ...Hobbies: legend + 3 checkboxes with labels... </fieldset>
      <p> ...label + textarea for comments... </p>
      <p> ...submit button... </p>
    </form>
  </body>
</html>
```

Grading Rubric (Likert Scale: 1–3)

Rating	Level	General Meaning
3	Excellent	Fully meets the requirement; complete, correct, and well-organized.
2	Satisfactory	Partially meets the requirement; minor errors or omissions.
1	Needs Improvement	Does not meet the requirement; major errors, or missing entirely.

Criteria	3 – Excellent	2 – Satisfactory	1 – Needs Improvement
A. HTML Document Structure (2 criteria)			
1. Document Skeleton	Has <!DOCTYPE html> and correctly nested <html>, <head>, and <body> tags. Nothing is missing or misplaced.	Has the DOCTYPE and all three tags, but one is misplaced or improperly nested (e.g., content outside <body>).	DOCTYPE is missing, or two or more required tags are missing or incorrectly used.
2. Title and Code Formatting	Has a descriptive <title> (e.g., includes "HTML Form") and consistent indentation throughout the file.	Has a <title> that is generic (e.g., "Document"), or indentation is inconsistent in some parts.	<title> is missing, or the code is mostly unindented and hard to read.
B. HTML Form Elements (4 criteria)			
3. Text Inputs (Name and Email)	Both inputs are present inside a <form>, use appropriate types (text, email), and have name and id attributes.	Both inputs are present, but attributes or types are incomplete (e.g., email uses type="text", or no id).	Only one input is present, or inputs are outside the <form> tag.
4. Radio Buttons (Gender)	Male, Female, and Other are present, share the same name attribute (so only one can be selected), and each has a value.	All three options are present, but the name or value attributes are incomplete or inconsistent.	One or more options are missing, or the buttons are not grouped (multiple can be selected).
5. Checkboxes (Hobbies)	At least three hobbies (e.g., Reading, Traveling, Sports) are present, each with a name/value, and multiple can be selected.	Three hobbies are present, but name/value attributes are incomplete, or fewer than three hobbies are given.	Fewer than two checkboxes, or checkboxes are implemented with the wrong input type.
6. Textarea and Submit Button	A <textarea> with rows/cols (or equivalent) and a working submit button (<input type="submit"> or <button>) are both present.	Both elements are present, but one is incomplete (e.g., no rows/cols, or the button has no label).	One or both elements are missing, or the submit button is not inside the <form>.
C. HTML Formatting (3 criteria)			
7. Paragraphs and Line Breaks (<p>,
)	<p> tags clearly separate the form sections, and is used appropriately (not excessively) for line breaks.	<p> or is used, but inconsistently, or is overused as a substitute for <p>.	Neither <p> nor is used, or the form is a single crowded block.
8. Labels (<label>)	Every form control has a <label> properly connected using the for attribute matching the input's id.	Most controls have labels, but some are missing or the for/id link is not connected.	Labels are mostly missing, or plain text is used instead of <label>.
9. Fieldset and Legend	<fieldset> with <legend> is used to group related elements (at least Gender and Hobbies), and a section titled "HTML Form" is present.	<fieldset> and <legend> are used for only one group, or the "HTML Form" section title is missing.	<fieldset> or <legend> is not used at all.
D. File Naming and Submission (1 criterion)			
10. File Name and Timeliness	File is named correctly (Lastname_FormActivity.html), opens properly in a browser, and is submitted on time.	File name is slightly incorrect (e.g., wrong capitalization or spacing), or it is submitted late (within the allowed grace period).	File name does not follow the convention, the file does not open, or it is submitted very late.

Points Distribution

Category	No. of Criteria	Max Raw Score (×3)	Equivalent Points (/50)
A. HTML Document Structure	2	6	10
B. HTML Form Elements	4	12	20
C. HTML Formatting	3	9	15
D. File Naming and Submission	1	3	5
TOTAL	10	30	50
